Under parts white. The fore part of breast and the sides black, the feathers mostly edged with white. Crown, rump, and sides of breast yellow. Cheeks and lores black. The eyelids and a superciliary stripe, two bands on the wing and spots on the outer three tail feathers, white. Female of duller plumage and browner above. Length, 5.65; extent, 9.25; wing, 3.00; tail, 2.50; iris brown; bill and feet black. Hob.--Eastern North America to the Missouri plains. Stragglers seen on Puget Sound. On the 1st of May, 1856, I obtained a bird, which, according to the description in Audubon s Synopsis, appeared to belong to the present species, the white throat being present. In all other respects this bird resembled the S. Audubonii. It was shot in the same situation frequented by birds of the latter species, and its habits...

These sorts of pdf is the greatest ebook offered. We have study and that i am sure that i will going to study once more once more in the future. Its been printed in an remarkably simple way and it is only after i finished reading through this pdf through which in fact transformed me, affect the way i believe.
